

Participants in the World Wide Views event came from all over Australia, with no specific knowledge or particular view on climate change. The recruitment was done by contacting hundreds of people at random, and the final group of one hundred represents a mix of characteristics like age, gender, ethnicity, educational background, household type, income levels. This is a real strength of the “citizens’ dialogue” process. The participants broadly mirror the same mix of characteristics present in the Australian population - they came from all the places shown on the map.

If you were one of the 100 in Sydney on 26 September, [click here for downloads, information and tools to talk about climate change.](#)

The basic costs of the invited participants were covered by the University of Technology Sydney. This was to ensure that no-one was excluded based on expense. For more about the event and process, please see:
