Please email [newsletter@wwviews.org.au](mailto:newsletter@wwviews.org.au) to get added to the list for information and notice of report release.

World Wide Views on Global Warming (WWViews) is a world-first, global, democratic process initiated by the Danish government agencies the Danish Board of Technology and the Danish Cultural Institute. WWViews aims to empower regular citizens to give their preferences for policy and action on climate change.

Participants in Australia spent a day and a half deliberating crucial climate issues, then voting, providing a group answer to a set of pre-set questions and recommendations to political leaders.

Over the course of 48 hours, other nations held exactly the same process, providing a global set of answers to the same questions on climate change. There are 38 WWViews participating countries, with 45 partners.
